SUMMARY

Building and looking after core back-office systems at a satellite operator (finance approvals, SAP integration, central sign-in) and supporting others across the organisation. Recent work includes moving decade-old platforms to .NET 8 without service interruption.

Much of my work is modernising long-running systems carefully, working from verified behaviour — checking how a system actually runs against the database before any change so that upgrades and migrations preserve the existing business process — particularly for systems handling finance and approvals, where getting it right matters most.

EXPERIENCE

Full Stack Developer — Gulf Space Technology (formerly Thaicom PCL) Dec 2018 – Present

- Migrated decade-old ASP.NET Web Forms systems to .NET 8 and Next.js on the existing database, without service interruption.
- Directed external vendors and outsourced developers: task assignment, code review and acceptance, and escalation with the SAP system vendor.
- Tried out and shared tooling that proved useful to the team: Claude Code with shared skills and a knowledge base colleagues now use, RabbitMQ to queue RPA workloads, and a clean-architecture split of .NET API and Next.js front end in place of the old monoliths.
- Designed a permission layer granting access by organisational attributes (business unit, department, position) rather than per-user assignment; a single rule change propagates to every application behind SSO.
- Designed automation with Power Automate, AI Builder and UiPath for document processing and to work around limits of the SAP ECC6 system.
- Following a proposal from the DevOps team, developed the central SSO on Microsoft Entra ID (OAuth 2.0) and worked through moving other applications onto it, replacing each app's separate login.
- Built a web service and flow that syncs employee data into on-premise Active Directory, automating user provisioning and deprovisioning.
- Brought AI tooling into the development process for debugging and reverse-engineering legacy systems, cutting work that took days down to a single session.

.NET 8 · ASP.NET Core · ASP.NET Web Forms · Vue.js · Next.js · SQL Server · RabbitMQ · Python · Docker · SAP

Programmer — Bureau of Tuberculosis, Ministry of Public Health Oct 2017 – Oct 2018 · Bangkok

- Developed web applications in C#.NET on .NET Framework 4.5 and wrote the database stored procedures.
- Handled business intelligence work using SSAS and Tableau.

C# · .NET Framework · SQL Server · SSAS · Tableau

System Development and IT Support Officer — Ramathibodi Facilities Services Jul 2014 – Sep 2017

- Built an IT asset management system, an IT service request system (C#, ASP.NET MVC, Entity Framework) and a seminar registration system.
- Administered Active Directory, the electronic document system and G Suite (including mailbox migration), plus hardware, network and preventive-maintenance planning.

C# · ASP.NET MVC · Entity Framework · Active Directory · K2

IT Technician — SVOA Public Company Limited Jul 2013 – Mar 2014

- Supported medical staff on site and carried out preventive maintenance on IT equipment and networks.

IT support · Networking

SELECTED WORK

Most are internal systems, so names and screenshots are withheld. Each is described by what it does, and I'm glad to go deeper in interview.

End-to-end SAP document production pipeline

Re-processed the entire back catalogue (tens of thousands of documents) and diffed every one against its original to zero differences before the new path became the default.

Enterprise access management (rewrite)

Onboarding no longer requires per-person configuration; matching a rule grants the corresponding menu set immediately.

SAP integration middleware

Removed the need for each downstream system to integrate with SAP independently, consolidating maintenance into a single point.

Budget request & approval system

Eliminated paper routing entirely; approvers complete the process through the central portal.

Employee identity lifecycle automation

Leaving-day work runs as one scheduled set — disabling the account, reclaiming licences, removing group memberships and setting mail forwarding — instead of being worked through system by system by hand.

Organisation-wide automation

Synchronises employee data into the on-premise directory on a schedule, so every system reading from it stays consistent without integrating with HR directly.

SKILLS & TOOLS

Core	C#, TypeScript, SQL, Python, JavaScript, Java
Backend	.NET 8, ASP.NET Core, ASP.NET WebForms, Dapper, EF Core, REST, SOAP
Frontend	Vue.js, Next.js, React, Tailwind CSS, HeroUI, HTML/CSS
Databases	SQL Server, MySQL, MariaDB, Oracle
Infra & DevOps	Docker, RabbitMQ, Hangfire, Git, GitLab CI, Nginx
AI engineering	Claude Code, Skills & hooks, MCP servers, Agent workflows, Prompt/context engineering, Automated code review
Enterprise & automation	SAP integration (RFC), Active Directory, Microsoft Entra ID, Microsoft Graph, ServiceNow API, Power Automate, Power Apps, Power Pages, AI Builder, Dataverse, UiPath, Webflow

EDUCATION

B.Sc. Computer Science — King Mongkut's University of Technology North Bangkok	2009 – 2013
Vocational Certificate and Higher Vocational Certificate, Business Computer — Trang Technical College	2004 – 2009

TRAINING & BADGES

Microsoft Learn: Data Engineering on Microsoft Azure, Developing Solutions for Microsoft Azure, Microsoft Azure Security Technologies, Microsoft Power BI Data Analyst

Google Cloud: skill badges — Gemini, multi-agent, RAG, Document AI, Kubernetes and core platform work
