Core: C# · ASP.NET Core · .NET Framework 2.0 – .NET 10 · SQL Server · Power Automate

SUMMARY

I build and maintain core back-office systems at a satellite operator (approval workflows, SAP integration, single sign-on) and support other systems across the organisation. Recently moved decade-old systems to .NET 8 with no downtime.

I modernise legacy systems carefully. Before changing anything, I check how the system really behaves against the database, so upgrades keep the business process unchanged. Some of these systems are about 20 years old and must keep running; new systems use current technology.

EXPERIENCE

Full-stack Developer — Gulf Space Technology (formerly Thaicom PCL) 2022 – Present
Previously: Senior Programmer Analyst Dec 2018 – 2022

- Migrated ASP.NET Web Forms systems to .NET 8 and Next.js on the existing database, with no downtime.
- Delivered several projects end to end on my own: gathering requirements, development, testing (manual test cases across document conditions, AI-assisted unit tests for smaller functions) and support after go-live.
- Developed the central SSO on Microsoft Entra ID (OAuth 2.0), based on a DevOps team proposal, and moved apps onto it one by one; around 40 internal applications on the company portal now sign in through it.
- Designed a permission layer that grants access by business unit, department and position instead of per user. One rule change applies to every app behind SSO.
- Built 90+ Power Automate cloud flows across production and IAM environments, plus AI Builder and UiPath automation, for document processing, system integration and SAP ECC6 workarounds.
- Implemented a web service and flow that syncs employee data into on-premises Active Directory, automating user provisioning and deprovisioning.
- Supervised vendors and outsourced developers: assigning tasks, reviewing code, accepting deliverables, and escalating issues to the SAP vendor.
- After testing both on real work, introduced RabbitMQ for RPA job queues and split old monoliths into a .NET API and a Next.js front end (clean architecture).
- Brought AI tools into development (Claude Code with shared skills and a knowledge base the team now uses) to help debug and reverse-engineer legacy systems.

.NET 8 · ASP.NET Core · ASP.NET Web Forms · Vue.js · Next.js · SQL Server · RabbitMQ · Python · Docker · SAP SOAP services

> **Key projects**
> *These are internal systems, so they are described by function, not name. Happy to discuss details in an interview.*
>
> **Automated SAP invoice and receipt pipeline** — Before go-live, re-ran all past documents (tens of thousands) and compared each with its original until there were zero differences.
>
> **Enterprise access management (rewrite)** — Added ISO audit reports: rule-by-menu matrix, user access comparison, orphan-account detection and audit log.
>
> **SAP integration middleware** — Used AI to work out XML queries for the vendor's existing SOAP services (e.g. customer data), instead of waiting for the ABAP team to build new endpoints.
>
> **Budget request & approval system** — Added a budget check against SAP at submission, instead of when the request reaches finance.
>
> **Employee onboarding/offboarding automation** — Automated offboarding as one scheduled job (disable account, reclaim licences, remove groups, forward mail), replacing manual steps in each system.
>
> **Organisation-wide automation** — Created a shared alert endpoint that routes network, document-processing and mail-queue alerts from other systems to the right team's chat.

Programmer — Bureau of Tuberculosis, Ministry of Public Health Oct 2017 – Oct 2018

- Developed web applications in C#.NET on .NET Framework 4.5 and wrote the database stored procedures.
- Handled business intelligence work using SSAS and Tableau.

C# · .NET Framework · SQL Server · SSAS · Tableau

System Development and IT Support Officer — Ramathibodi Facilities Services Jul 2014 – Sep 2017

- Built an IT asset management system, an IT service request system (C#, ASP.NET MVC, Entity Framework) and a seminar registration system.

C# · ASP.NET MVC · Entity Framework · Active Directory · K2

IT Technician — SVOA Public Company Limited Jul 2013 – Mar 2014

SKILLS & TOOLS

Core	C#, TypeScript, SQL, Python, JavaScript
Backend	.NET Framework 2.0 / 3.5 / 4.x, .NET Core 1 – 3.1, .NET 5 / 6 / 8 / 10, ASP.NET Core, ASP.NET Web Forms, Dapper, EF Core, REST, SOAP
Frontend	Vue.js, Next.js, React, Tailwind CSS, HeroUI, HTML/CSS
Databases	SQL Server, MySQL, MariaDB, Oracle
Infra & DevOps	Docker, Portainer, RabbitMQ, Hangfire, Git, GitLab CI, Nginx, Azure Key Vault, Azure Blob Storage
AI engineering	Claude Code, Skills & hooks, MCP servers, Agent workflows, Prompt/context engineering, Automated code review
Enterprise & automation	SAP SOAP services (consumer), Active Directory, Microsoft Entra ID, Microsoft Graph, ServiceNow API, Power Automate, Power Apps, Power Pages, AI Builder, Dataverse, UiPath, Webflow

EDUCATION

B.Sc. Computer Science — King Mongkut's University of Technology North Bangkok 2009 – 2013

Vocational Certificate and Higher Vocational Certificate, Business Computing — Trang Technical College 2004 – 2009

TRAINING & BADGES

Microsoft Learn: Data Engineering on Microsoft Azure, Developing Solutions for Microsoft Azure, Microsoft Azure Security Technologies, Microsoft Power BI Data Analyst

Google Cloud: skill badges — Gemini, multi-agent, RAG, Document AI, Kubernetes and core platform work

LANGUAGES

Thai — Native

English — Reading and writing for work (technical documentation, email, chat) · not conversational in spoken English
